ENBRIDGE PIPELINES INC. – NOTIFICATION OF STREAM BED AND SLOPE INSPECTIONS

As part of maintenance procedures, Enbridge must complete various inspections of its pipelines. This letter is to inform you that Enbridge Pipelines Inc. ("Enbridge") has contracted BGC Engineering Inc. to perform stream bed and slope inspections on our pipeline right-of-way beginning on between September 29th – October 24th, 2026. (weather and work schedules permitting). You may notice a parked vehicle or see two or three people (wearing high visibility personal protective equipment) walking on your property to access the right-of-way.

The work will be done 7 days per week from 7:00 AM until 7:00 PM. Every effort will be made to avoid any disturbance to landowners.

Please note that no excavation or ground disturbance activities will occur.

The reason for the survey is to ensure that the pipelines have the necessary cover to maximize their protection along sloped banks and at water crossings. At the site the field crew will be pinpointing the exact location of the pipe(s) using a pipe locating instrument and making observations at the streams and slopes to assess site conditions over or adjacent to our pipeline.

The crew will be accessing the right-of-way primarily from public roads. At times, it will be necessary for them to walk into streams or slopes leaving their vehicle at the road. All vehicles will remain within the road limits or farm lanes. The field work will be done on foot so as not to damage the farmland. NO MECHANICAL EQUIPMENT WILL ENTER THE LANDS.

Due to the large number of affected landowners, it is difficult to contact each of you with the specific information as to precisely when we will be on your land. Therefore, this is the only notice that you will receive from Enbridge. However, if our employees see someone home, they will attempt to make contact with you prior to entering your land. If you have any questions/concerns or special instructions please call the land advisor listed below.

We appreciate your cooperation and understanding in allowing us to perform these kinds of activities, as required by federal regulations, to safely operate and maintain our pipeline.

Thank you in advance.
Yours truly,

Merv Weishar
Sr Land Advisor
